Links in PDF

There are two types of links in PDF: a link to a specific position in the same PDF document, and a link to an external document. The internal-destination property of fo:basic-link indicates to link to a position in the same document. Its destination may be either an ID or a page number. The external-destination property indicates to link to an external document. Its destination may be either an external file or a website.

Linking to an internal destination

<u>Linking to an ID</u>: Specify internal-destination="Link-01" on the link; specify id="Link-01" on the link's destination.

<u>Linking to a page number (page 2)</u>: internal-destination="2"

Linking to a page number (page 2) and setting the display ratio (200%): internal-destination="2#zoom=200"

Linking to an external file (attachment-sample-1.pdf). : external-destination="//attachment-sample-1.pdf"

Linking to a website (https://www.antennahouse.com/) : external destination="//attachment-sample-1.pdf"

Linking to a website (https://www.antennahouse.com/): external-destination www.antennahouse.com/"

Linking to a website (https://www.antennahouse.com/): external-destination www.antennahouse.com/"

This toxicology was a superfect of the property of the p
