# Easy, yet powerful Wordpress Flipbook Plugin

---

Creating flipbooks is fast and easy. For jQuery verssion here are many ready to use html examples provided with the plugin.

For WordPress version just upload your PDF or images and insert the shortcode into your post or page.

# Get PDF Free support inbuilt and have easy PDF integration without any extra extension

---

If you have any questions, ideas, suggestions of new skins that you want to be available for all customers feel free to contact me.

# Responsive Flipbook Plugin

---

3D FlipBook is designed to occupy whole container where you place it. So if the container size changes the plugin recompute its dimensions. So keep the container responsive and plugin will be responsive too.

# Easy, yet powerful Flipbook Plugin

---

dFlip is also a responsive Flipbook plugin that works in wide range of devices from big screen desktop to compact phones.

# LightBox Mode

---

With lightbox mode you can put a text link or an image link anywhere on your site, and by clicking on a link the flipbook will be opened in a lightbox. This way you can have multiple books / magazines / brochures on the same page.

## Why choose?

---

It's very responsive and device friendly. You will have almost all features you'll look out for: like hot-spots, PDF annotations, outline, custom outline, image support, etc all in a single package.

## **Build with latest Technologies**

HTML5, CSS3, Javascript, jQuery: technologies behind the scene. Pageflip generates valid HTML5 document, styled with CSS3, powered by Javascript & jQuery.

## Image and PDF support

The plugin can use PDF, images and HTMLs as texture for pages. Supporting HTML format as texture is a new technology no one of other plugins support it. HTML allow easily create interactive books, handle user events, manage plugin behaviour. Using HTML textures is next important step in development web animation.

It is recommended to have a look at live [examples](#).

# Support for PDF links

The easiest way to start right now -

Download demo version. It contains several examples: inserting 3D FlipBook into a page, using with a modal window, changing default settings, choosing an appropriate skin.

## Optimized for CPU and RAM low usage

The plugin performance does not depend on number of pages because it does not manage single pages. 3D FlipBook works with blocks of pages

For fast rendering 3D graphics 3D FlipBook uses WebGL. WebGL is a API for creating interactive 3D graphics without using plugins.

## **Unique Smart Rendering for low CPU consumption**

If the book is opened there can be two blocks for left and right internal pages. There can be more blocks just when the flipping animation is performing. The plugin has no problem with more than 50 simultaneously flipping blocks. When the turn is finished the turned block merges with neighbour block.

```
<!--EASY HTML METHODS-->
<!--Normal Flipbook-->
<div class="_df_book" source="manual.pdf"></div>

<!--Thumbnail Light-box-->
<div class="_df_thumb" tags="3d,images"
    thumb="manual.jpg" source="manual.pdf">Dflip Manual</div>

<!--Button Light-box Usage-->
<div class="_df_button" source="manual.pdf">Dflip Manual</div>

<!--jQuery Method-->
<script>
var flipBook = $("#flipbookContainer").flipBook("manual.pdf");
</script>

var pdf = 'pdfs/compressed.tracemonkey-pldi-09.pdf';

var options = {height: 500, duration: 800};

var flipBook = $("#flipbookContainer").flipBook(pdf, options);
```

## Easy jQuery usage syntax

It's very responsive and device friendly. You will have almost all features you'll lookout for: like hot-spots, PDF annotations, outline, custom outline, image sup-

## Single Page View

Flipbook layout can be changed based on the device type. Besides the standard double page view, there is a single page view that can be used either on mobile devices or both on desktop and mobile.

Single page view offers better reading experience on smaller screens but still keeps the 3D flipping effect and shadows.

## Based on realistic 3D mockup library

It's very responsive and device friendly. You will have almost all features you'll look out for: like hot-spots, PDF annotations, outline, custom outline, image sup-

# Interactive

Supporting HTML opens wide abilities for creating interactive books. It allows to use CSS3 and JavaScript, create navigation, use hover effects and much more.

## Smart Page Loading

Only current pages are loaded, so Real 3D FlipBook works even faster.

For fast rendering 3D graphics 3D FlipBook uses WebGL. WebGL is a API for creating interactive 3D graphics without using plugins.
